Description of activities

Art	Art is an exciting and creative way for children to explore their imagination while developing important skills. Through hands on activities, kids build confidence, improve fine motor skills, and learn to express their ideas visually. In our art lessons, students will enjoy a variety of creative experiences including drawing, painting, papier-mâché, sculpting, street art, and collage. These activities will be thoughtfully combined with art history, helping children discover famous artists, styles, and cultures while creating their own unique artwork. This approach makes learning fun, inspiring, and meaningful for every young artist.
Boxing and self defense	Throwing punches on bags and other skills to defend yourself will be taught here!
Buddies Book Worms	Do you love reading? Books about adventures, funny stories, friendship or mystery? Then join our lovely Miss Bridget after school in the Library Book Club. We will spend time each week reading and talking together about books, authors, exploring the library and sharing what you like to read. With a cup of tea, great discussions and wonderful books. <i>*This activity is in English</i>
Chess	Playing Chess will help you to develop your brain in ways no other activity does! It is fun and challenging! <i>*Please note: if you register your child for the advanced class, your child needs to already know the basic rules of chess.</i>
Dance & Music	Do you love music and dancing? Come sing, move and play with us, and discover your inner performer! Through singing and dancing we explore music together in a fun and creative way. Join juf Eline from De Muziekfabriek for this wonderful musical journey!
Hiphop	Who comes to dance to modern music after school? The teacher teaches us real cool moves!!
Karate	Children's karate is a fun and structured martial art that combines traditional Okinawan techniques, movement, coordination exercises, partner activities, and character development. Lessons balance dynamic physical training with moments of focus, discipline, and reflection. Karate is not about violence; it is about developing self-control, respect, perseverance, confidence, and responsibility. Every child progresses at their own pace in a safe and supportive environment, developing physical fitness, concentration, resilience, practical self-defense skills, situational awareness and incident prevention, discipline, and positive values that extend beyond the dojo and into everyday life.
Little Engineers Academy	Designed for curious, creative children with problem-solving skills, the Little Engineers Academy Club aims to nurture them as individuals who do not just consume technology but also create it. In our classes, children acquire fundamental skills in science, technology, engineering, and mathematics

	(STEM) while also building self-confidence through hands-on projects. Your children will learn engineering principles by constructing their own robots, creating animations, and exploring future technologies. This club offers a unique opportunity for them to learn while having fun, developing their creativity and social skills. Additionally, during the course, your children's talents will be analyzed, and parents will receive a detailed analysis report highlighting their children's abilities. This report will provide insights into which areas your children excel in and what future opportunities might be best suited to their strengths. Join us on this exciting journey for your children!
Mad Science	Mad Science has created a vast library of unique after-school programs. Our spectacular demonstrations, hands-on activities, and real-world discussions make learning about science fun for kids! Our interactive, one-hour after school science programs are themed around particular areas of science and include such topics as rocketry, magnets, polymers, and even the science of toys. This is science like you've never experienced before!
PDB School Band	Have you ever dreamed of singing or playing in a real band? Mr. Lennert is a real songwriter, producer and band coach. He teaches our students to play different instruments, but most of all how much fun it is to make music together. Come join our very cool school band!
WildWoozt	Super exciting activities for all students. They are going to play games from laser game to archery shooting outdoor (indoor in case of very bad weather). It's a great way to explore and improve motor skills and really learn to enjoy outdoor playing. As the students will play outdoors, it's essential that students wear clothes which can get a bit dirty.
Yoga	Children's yoga is a mix of yoga poses, concentration exercises, breathing games, children's massage, yoga games and creative skills. Dynamics and relaxation alternate. Yoga is not about competition or achievement. There are no winners or losers, no right or wrong. You can be who you are. This leads to self-confidence and self-esteem.
